

# ***Come to learn and learn to grow***

Context Required:” A good teacher teaches and a great teacher inspires” under new education policy the role of a teacher is completely changed. Unlike in the past, where his/her role used to be that of an instructor, but today it has been that of a social reformer who practices rather than preach and inspires students to learn by themselves rather than teach. As it is said in “Markata Kishora Nyaya” an infant holds tight its mother to avoid possible downfall, here in the institution it is strongly felt that students should rise to the occasion and catch hold of the opportunities come to them in the form of co-curricular and extracurricular activities, organize an event or awareness program on their own and present their views to peers and teachers successfully and in the process they will learn and grow.

Objectives: 1.To transform students into self learners rather than passive listeners. 2.To enable the students to realize their strengths and make the most of them. 3.To identify the weaknesses work out on them, to catch hold of the opportunities that come to them and to overcome threats that haunt and pull them back 4.To guide the students towards the path of growth and success.

Practice : This practice “ come to learn and learn to grow is the brain child of Dr R.praveen Dathu and Dr K.Sudhakar of Department of Zoology. They observed that their students have a lot of interest to learn things on their own, willingness to work together, ability to present their views stability to achieve the goal so both of them planned to create a platform for the students to showcase their event organizing & theme presenting abilities. Living up to the expectations of their teachers II BZC students-organized an awareness program on World Aids Day i.e on 01/12/2021 .This was a program of its kind as it gave the II BZC students A.Sri Ganesh, M.Venu, M.Harsha Vardhan, M.Krishna Veni and K.Uma Vaishnavi a great opportunity to brush up their subject knowledge and present it in a systematic manner through power point presentation and to win the commendations of their teachers.

Obstacles faced: Inexperience, fear of failure, nervousness and tension are the obstacles faced by the students while organizing the program and these are overcome by the presence and guidance of their experienced teachers and encouraging peers and all the staff members.

Resources needed: LCD Projector for power point presentation and PA system which are available in virtual lab (Room No.19)

Impact of the practice: “come to learn and learn to grow” had a great impact on peers and juniors, inspired them to go for a study tour to K.V.R Degree college, Nandigama to observe their best practices and share our institutional best practices over there. Further it motivated the students to organize many programmes such as “ April Cool (01/04/2022), Reduce, Reuse and Recycle (on world Earthday 22/04/2022) and gain great learning experience.
